

# Promote Oral Health Learning in Children With Interactive Game

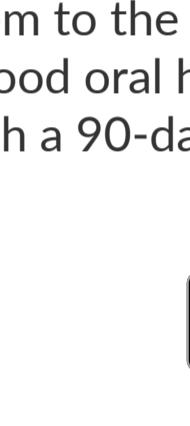

## YOUR BENEFITS:

Ensure even your youngest patients learn the importance of oral health

Show families you care and increase your retention rates

Let patients overcome dentist anxiety and boost their loyalty

Be a trendsetter by recommending a gamified oral health experience

## HOW IT WORKS IN 5 STEPS:

1

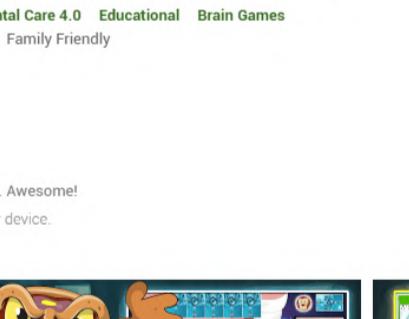

Explain to patients about Dentacare: Jaws of Battle. It helps them transform the dull routine of brushing teeth into a fun interactive experience. Soon they will forget they are even doing it!

2

Share that the game is a perfect way for children to learn about oral health in an immersive medium, they all know and love. It is also a great opportunity for some family fun while learning.

3

Help them download the app if needed. They can easily register via email or their social media profile; it takes just a few minutes.

4

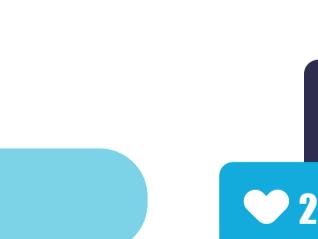

Remind them that they will need to stick to a proper oral hygiene routine and brush their teeth twice a day (for real) in order to enter the battles! The game will adapt to their schedule.

5

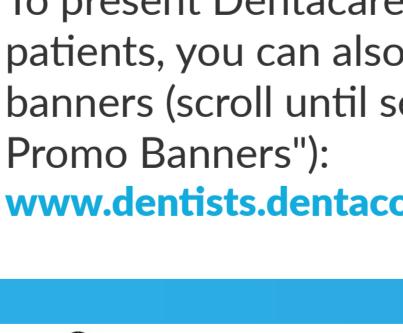

Keep track of their progress by asking them frequently about the new character cards they've unlocked. Add additional commentary on the dental topics they've learned through the game to further strengthen the awareness.

## YOU HAVE ADULT PATIENTS?

Point them to the Dentacare - Health Training App! It will teach them good oral hygiene and make them aware of bad habits through a 90-day challenge, focused on persistent performance. [www.dentacare.dentacoin.com](http://www.dentacare.dentacoin.com)

## HOW TO ENGAGE YOUR PATIENTS

### LET KIDS HAVE FUN

Overcome dentist anxiety in your youngest patients by introducing the game while they are in line. The immersive experience will let them relax, keep busy with something fun, and learn more about dental health as they wait for their turn on the dental chair.
